

Neris Solane v689 v6 numerical evidence overview

Outcome and scope

Two frozen synthetic owner sessions completed. Core outcomes are 180 completed, ten represented, five open gaps and five exact gates. This is same-owner evidence, not independent reproduction or public authority.

Owner execution

Session	Safe	Candidate refusals	Refinements	Tests
X1	100	100	100	20
X2	100	100	100	21

Assumptions and counterexample

For $[0,1,0,1,0]$, α one raises the selected finite energy from 2 to 10; α one quarter lowers it to one quarter. This constrains a numerical statement and does not challenge the physical second law.

Text description of figure: two rows compare the same initial vector under unrestricted and bounded steps, showing the energy before, after, and the distinct interpretation.

Evidence package and next edge

The package contains a 13-module baton, 288 cards, exact manifests, three reviewed direct packages, 50 exact packets and 30 blocked subjects. Vesper Arlen v689-v7 remains prepared but unsent until the exact terminal gate.

Manual accessibility review, empirical validation, professional review, affected-party acceptance, Maori authority and Stage 20 remain open.
